MY1 Series

 **SMC**
CAT.ES20-261A

With 5 standardized guide types

Basic Type**MY1B Series**

p. 12

Wide variations from $\varnothing 10$ to $\varnothing 100$

Can be combined with a variety of guides to accommodate conditions.

Simple design without guide facilitates space savings.

**Cam Follower Guide Type****MY1C Series**

p. 56

Strong against moment, compatible with long strokes

Makes smooth operation possible even with an off-set load.

**Slide Bearing Guide Type****MY1M Series**

p. 38

Simple guide type that can mount a workpiece directly.

Integrated guide allows use in a wide range of conveyor systems.

**Linear Guide Type****MY1H Series**

p. 72

Uses a linear guide to achieve high repeatability

Small and medium sizes 10 to 40 are ideal for pick & place.

**High Rigidity/Linear Guide Type****MY1HT Series**

p. 98

Linear guide heavy loaded workpieces can be accommodated by using two linear guides.

Rodless cylinder
MY1BH

2 linear guides

Minimal leakage seal construction

- The flexible material of the seal belt allows for improved adherence to the cylinder tube, resulting in a reduced leakage amount. (50% reduction compared with the existing product)

Applicable models

MY1□16 to 50

Dust seal band with improved holding force

- The seal magnet on the cylinder tube adsorbs the dust seal band with magnetic force, resulting in improved holding force.

- The dust seal band can be easily removed for replacement by simply loosening the two holding screws. Easier maintenance

Applicable models

MY1B10, 25 to 40, 80, 100
MY1H10, 25 to 40

Allows for piping to be connected according to installation conditions. Centralized piping type for increased piping freedom

Slide table operating direction

Front piping

Side piping

Bottom side piping

Applicable models

All models

MY1M and MY1C compatibility guaranteed

- With the same outer dimensions and workpiece mounting dimensions, both series are compatible with stroke adjustment units, side supports, auto switches, etc.

Applicable models

MY1M16 to 63
MY1C16 to 63

Built-in adjustment bolt and shock absorber, 3 stroke adjustment unit types

- The shock absorber softens the impact of workpieces at the stroke end, and the adjustment bolt increases the repeatability of the stopping position.
- The following 3 unit types each meet the specification requirements.
- An intermediate fixing spacer for stopping slide tables in the middle of the stroke is available as well.

A unit	L unit	H unit	Intermediate fixing spacer as standard
<p>With adjustment bolt</p>  <p>Adjustment bolt</p>	<p>With adjustment bolt + low load shock absorber</p>  <p>Adjustment bolt Low load shock absorber</p>	<p>With adjustment bolt + high load shock absorber</p>  <p>Adjustment bolt High load shock absorber</p>	<p>Fixture can be selected to hold the stroke adjustment unit at the intermediate stroke position.</p> 

Applicable models

All models
Except MY1B50 to 100

Standardized end lock

- The end lock type has been standardized for bore sizes 16 to 40 of the MY1H series. Mountable at any position on one or both sides

Applicable models
MY1H16 to 40

Side support

- Prevents deflection of the cylinder tube at a long stroke. Makes linear operation possible
- Now with 2 selectable mounting options in order to support mounting frames

Applicable models
All models

Floating bracket

- 2 connection types can be selected. ($\varnothing 25$ to $\varnothing 40$) Easier to connect to other guide types.

Applicable models
MY1B10 to 100

Auto switch wiring storage system

To increase safety, auto switch lead wires can be stored to prevent accidental contact with slide tables.

- Improved safety and accuracy of the entire system can be achieved by storing auto switch lead wires in the product's designated lead wire containment grooves.

Applicable models

MY1M25 to 63
MY1C25 to 63

Auto switches can be mounted from the front. Contributes to reduction in mounting time.

- Auto switches can be mounted from the front at any position on the mounting groove.

Applicable models

MY1B25 to 40
MY1H25 to 40
MY1HT50, 63

Extremely easy to maintain

- It is possible to replace cylinders with a workpiece being mounted.

For details, refer to page 125.

Applicable models

MY1HT50, 63

Two mounting types, Space saving

- The cylinder body can be secured directly from either the top or bottom without the use of mounting brackets. This does not change the overall length dimension.

Applicable models

MY1□16 to 63

MY1 Series

Model Selection

Following are the steps for selecting the most suitable MY1 series to your application.

Standards for Tentative Model Selection

Cylinder model	Guide type	Standards for guide selection	Graphs for related allowable values
MY1B	Basic	Guaranteed accuracy not required, generally combined with separate guide	Refer to p. 13.
MY1M	Slide bearing guide	Slide table accuracy approx. $\pm 0.12 \text{ mm}^{*1}$	Refer to p. 39.
MY1C	Cam follower guide	Slide table accuracy approx. $\pm 0.05 \text{ mm}^{*1}$	Refer to p. 57.
MY1H	Linear guide	Slide table accuracy of $\pm 0.05 \text{ mm}$ or less required ^{*1}	Refer to p. 73.
MY1HT	High rigidity/Linear guide	Slide table accuracy of $\pm 0.05 \text{ mm}$ or less required ^{*1}	Refer to p. 102.

*1 "Accuracy" here means displacement of the slide table (at stroke end) when 50% of the allowable moment shown in the catalog is applied (reference value).

* These accuracy values for each guide should be used only as a guide during selection. Please contact SMC when guaranteed accuracy for MY1C/MY1H is required.

* Consider selecting the MY1□W with protective cover for use in environments where coolant, cutting oil, water droplets, dust particles, etc., may come in contact with the product.

Selection Flow Chart

*1 For external cushioning unit, the installation of a suitable cushioning mechanism near the load center of gravity by the customer's side is recommended.
It is possible to select all models of mechanically jointed rodless cylinder (MY1□ series) according to the step indicated above.
Refer to the separate operation manual for further details. If you have any questions, please contact SMC.

Types of Moment Applied to Rodless Cylinders

Multiple moments may be generated depending on the mounting orientation, load, and position of the center of gravity.

Coordinates and Moments**Static Moment**

Mounting orientation	Horizontal	Bottom	Wall	Vertical
Static load (m)	m_1	m_2	m_3	$m_4 \cdot g$
Static moment	M_1	$m_1 \cdot g \times X$	$m_2 \cdot g \times X$	—
	M_2	$m_1 \cdot g \times Y$	$m_2 \cdot g \times Y$	$m_3 \cdot g \times Z$
	M_3	—	—	$m_4 \cdot g \times Y$

*1 m_4 is a mass movable by thrust. Use 0.3 to 0.7 times the thrust (differs depending on the operating speed) as a guide for actual use.

g: Gravitational acceleration

Dynamic Moment

g: Gravitational acceleration, \bar{v}_a : Average speed, δ : Bumper coefficient

Mounting orientation	Horizontal	Bottom	Wall	Vertical
Dynamic load (F _E)	$1.4 \bar{v}_a \times \delta \times m_n \times g$			
Dynamic moment	M_{1E}	$\frac{1}{3} \times F_E \times Z$	—	—
	M_{2E} Dynamic moment M_{2E} is not generated.			
	M_{3E}	$\frac{1}{3} \times F_E \times Y$	—	—

* Regardless of the mounting orientation, dynamic moment is calculated with the formulae above.

MY1 Series

Calculation of Guide Load Factor

1. Operating Conditions

Operating cylinder MY1H40-500

Average operating speed v_a ... 300 mm/s

Mounting orientation Wall

Cushion Air cushion ($\delta = 1/100$)

For actual examples of calculation for each orientation, refer to the pages above.

2. Load Blocking

Mass and Center of Gravity for Each Workpiece

Workpiece no. W_n	Mass m_n	Center of gravity		
		X-axis X_n	Y-axis Y_n	Z-axis Z_n
W_a	0.88 kg	65 mm	0 mm	5 mm
W_b	4.35 kg	150 mm	0 mm	42.5 mm
W_c	0.795 kg	150 mm	111 mm	42.5 mm
W_d	0.5 kg	150 mm	210 mm	42.5 mm

n = a, b, c, d

3. Composite Center of Gravity Calculation

$$\mathbf{m}_3 = \sum m_n = 0.88 + 4.35 + 0.795 + 0.5 = 6.525 \text{ kg}$$

$$\mathbf{X} = \frac{1}{m_3} \times \sum (m_n \times X_n) = \frac{1}{6.525} (0.88 \times 65 + 4.35 \times 150 + 0.795 \times 150 + 0.5 \times 150) = 138.5 \text{ mm}$$

$$\mathbf{Y} = \frac{1}{m_3} \times \sum (m_n \times Y_n) = \frac{1}{6.525} (0.88 \times 0 + 4.35 \times 0 + 0.795 \times 111 + 0.5 \times 210) = 29.6 \text{ mm}$$

$$\mathbf{Z} = \frac{1}{m_3} \times \sum (m_n \times Z_n) = \frac{1}{6.525} (0.88 \times 5 + 4.35 \times 42.5 + 0.795 \times 42.5 + 0.5 \times 42.5) = 37.4 \text{ mm}$$

4. Calculation of Load Factor for Static Load

m₃: Mass

m₃ max (from ① of graph MY1H/m₃) = 50 [kg]

Load factor $\alpha_1 = m_3 / m_3 \text{ max} = 6.525 / 50 = 0.13$

M₂: Moment

M₂ max (from ② of graph MY1H/M₂) = 50 [N·m]

$M_2 = m_3 \times g \times Z = 6.525 \times 9.8 \times 37.4 \times 10^{-3} = 2.39 \text{ [N·m]}$

Load factor $\alpha_2 = M_2 / M_2 \text{ max} = 2.39 / 50 = 0.05$

M₃: Moment**M₃ max** (from ③ of graph MY1H/M₃) = 38.7 [N·m]

$$M_3 = m_3 \times g \times X = 6.525 \times 9.8 \times 138.5 \times 10^{-3} = 8.86 \text{ [N·m]}$$

$$\text{Load factor } \alpha_3 = M_3 / M_3 \text{ max} = 8.86 / 38.7 = 0.23$$

5. Calculation of Load Factor for Dynamic Moment

Equivalent load F_E at impact

$$F_E = 1.4V_a \times \delta \times m \times g = 1.4 \times 300 \times \frac{1}{100} \times 6.525 \times 9.8 = 268.6 \text{ [N]}$$

M_{1E}: Moment**M_{1E} max** (from ④ of graph MY1H/M₁ where 1.4V_a = 420 mm/s) = 35.9 [N·m]

$$M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 268.6 \times 37.4 \times 10^{-3} = 3.35 \text{ [N·m]}$$

$$\text{Load factor } \alpha_4 = M_{1E} / M_{1E} \text{ max} = 3.35 / 35.9 = 0.09$$

**M_{3E}:** Moment**M_{3E} max** (from ⑤ of graph MY1H/M₃ where 1.4V_a = 420 mm/s) = 27.6 [N·m]

$$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 268.6 \times 29.6 \times 10^{-3} = 2.65 \text{ [N·m]}$$

$$\text{Load factor } \alpha_5 = M_{3E} / M_{3E} \text{ max} = 2.65 / 27.6 = 0.10$$

6. Sum and Examination of Guide Load Factors

$$\sum \alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = 0.60 \leq 1$$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the sum of guide load factors $\sum \alpha$ in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "Guide Cylinder Selection Software" on the SMC website.

Load Mass

MY1H/m₃

Allowable Moment

MY1H/M₁

MY1H/M₂

MY1H/M₃

MY1B Series

Basic Type

$\varnothing 10, \varnothing 16, \varnothing 20, \varnothing 25, \varnothing 32, \varnothing 40, \varnothing 50, \varnothing 63, \varnothing 80, \varnothing 100$

Minimizing the unit size (dimensions) and combination with other guides is possible.

MY1B Series

Prior to Use

Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M1	M2	M3	m1	m2	m3
MY1B	10	0.8	0.1	0.3	5.0	1.0	0.5
	16	2.5	0.3	0.8	15	3.0	1.7
	20	5.0	0.6	1.5	21	4.2	3.0
	25	10	1.2	3.0	29	5.8	5.4
	32	20	2.4	6.0	40	8.0	8.8
	40	40	4.8	12	53	10.6	14
	50	78	9.3	23	70	14	20
	63	160	19	48	83	16.6	29
	80	315	37	95	120	24	42
	100	615	73	184	150	30	60

The above values are the maximum values for allowable moment and load mass. Refer to each graph regarding the maximum allowable moment and maximum load mass for a particular piston speed.

Caution on Design

- We recommend installing an external shock absorber when the cylinder is combined with another guide (connection with floating bracket, etc.) and the maximum allowable load is exceeded, or when the operating speed is 1000 to 1500 mm/s for ø16, ø50, ø63, ø80, and ø100.
- If the product is operated with a guide load factor which exceeds the standard value, malfunction may occur due to damage to the end cover and bearings. Therefore, be sure to confirm that the guide load factor is 1 or less.

Load mass (kg)

Moment (N·m)

<Calculation of guide load factor>

- Maximum load mass (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.
* To evaluate, use \bar{v}_a (average speed) for (1) and (2), and v (collision speed $v = 1.4 \bar{v}_a$) for (3). Calculate m_{max} for (1) from the maximum load mass graph (m_1, m_2, m_3) and M_{max} for (2) and (3) from the maximum allowable moment graph (M_1, M_2, M_3).

$$\text{Sum of guide load factors } \Sigma\alpha = \frac{\text{Load mass (m)}}{\text{Maximum load mass (m}_{max})} + \frac{\text{Static moment (M)}^{*1}}{\text{Allowable static moment (M}_{max})} + \frac{\text{Dynamic moment (M}_{E})^{*2}}{\text{Allowable dynamic moment (M}_{E,max})} \leq 1$$

*1 Moment caused by the load, etc., with cylinder in resting condition

*2 Moment caused by the load equivalent to impact at the stroke end (at the time of impact with stopper)

* Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ($\Sigma\alpha$) is the total of all such moments.

- Reference formula [Dynamic moment at the time of impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

m: Load mass [kg]

F: Load [N]

F_E: Load equivalent to impact
(at the time of impact with stopper) [N]

\bar{v}_a : Average speed [mm/s]

M: Static moment [N·m]

v : Collision speed [mm/s] $F_E = 1.4 \bar{v}_a \cdot \delta \cdot \frac{m}{3}$

M_E : Dynamic moment [N·m] $M_E = \frac{1}{3} \cdot F_E \cdot L_1 = 4.57 \bar{v}_a \delta m L_1$

U: Collision speed [mm/s]

L₁: Distance to the load center of gravity [m]

M_E: Dynamic moment [N·m]

δ : Bumper coefficient

With rubber bumper = 4/100

(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

g: Gravitational acceleration (9.8 m/s²)

*3 $1.4 \bar{v}_a \delta$ is a dimensionless coefficient for calculating impact force.

*4 Average load coefficient ($= \frac{1}{3}$): For averaging the maximum load moment at the time of impact with stopper according to service life calculations

- For detailed selection procedures, refer to pages 15 and 16.

Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum load mass value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the load mass for the selected conditions.

Maximum Load Mass

Select the load mass from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

Specific Product Precautions

MY1B Series

Model Selection

Following are the steps for selecting the most suitable MY1B series to your application.

Calculation of Guide Load Factor

1. Operating Conditions

Cylinder MY1B50-500
 Average operating speed v_a 300 mm/s
 Mounting orientation Horizontal
 Cushion Air cushion
 $(\delta = 1/100)$

For actual examples of calculation for each orientation, refer to the pages above.

2. Load Blocking

Mass and Center of Gravity for Workpiece

Workpiece no.	Mass m	Center of gravity		
		X-axis	Y-axis	Z-axis
W	5 kg	40 mm	40 mm	70 mm

3. Calculation of Load Factor for Static Load

m₁: Mass

m₁ max (from ① of graph MY1B/m₁) = 47 [kg].....

$$\text{Load factor } \alpha_1 = m_1 / m_1 \text{ max} = 5 / 47 = 0.11$$

M₁: Moment

M₁ max (from ② of graph MY1B/M₁) = 52 [N·m].....

$$M_1 = m_1 \times g \times X = 5 \times 9.8 \times 40 \times 10^{-3} = 1.96 \text{ [N·m]}$$

$$\text{Load factor } \alpha_2 = M_1 / M_1 \text{ max} = 1.96 / 52 = 0.04$$

M₂: Moment

M₂ max (from ③ of graph MY1B/M₂) = 6.2 [N·m].....

$$M_2 = m_1 \times g \times Y = 5 \times 9.8 \times 40 \times 10^{-3} = 1.96 \text{ [N·m]}$$

$$\text{Load factor } \alpha_3 = M_2 / M_2 \text{ max} = 1.96 / 6.2 = 0.32$$

4. Calculation of Load Factor for Dynamic Moment

Equivalent load F_E at impact

$$F_E = 1.4U_a \times \delta \times m \times g = 1.4 \times 300 \times \frac{1}{100} \times 5 \times 9.8 = 205.8 \text{ [N]}$$

M_{1E} : Moment

$M_{1E \ max}$ (from ④ of graph MY1B/M₁ where $1.4U_a = 420 \text{ mm/s}$) = 37 [N·m].....

$$M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 205.8 \times 70 \times 10^{-3} = 4.81 \text{ [N·m]}$$

Load factor $\alpha_4 = M_{1E}/M_{1E \ max} = 4.81/37 = 0.13$

M_{3E} : Moment

$M_{3E \ max}$ (from ⑤ of graph MY1B/M₃ where $1.4U_a = 420 \text{ mm/s}$) = 11.0 [N·m].....

$$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 205.8 \times 40 \times 10^{-3} = 2.75 \text{ [N·m]}$$

Load factor $\alpha_5 = M_{3E}/M_{3E \ max} = 2.75/11.0 = 0.25$

5. Sum and Examination of Guide Load Factors

$$\sum \alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = 0.85 \leq 1$$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors $\sum \alpha$ in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "Guide Cylinder Selection Software" on the SMC website.

Mechanically Jointed Rodless Cylinder

Basic Type

MY1B Series

ø10, ø16, ø20, ø25, ø32, ø40, ø50, ø63, ø80, ø100

How to Order

① Bore size

10	10 mm
16	16 mm
20	20 mm
25	25 mm
32	32 mm
40	40 mm
50	50 mm
63	63 mm
80	80 mm
100	100 mm

② Port thread type

Symbol	Type	Bore size
Nil	M thread	ø10, ø16, ø20
	Rc	ø25, ø32, ø40, ø50, ø63, ø80, ø100
TN	NPT	
TF	G	ø100

③ Piping

Nil	Standard type
G	Centralized piping type

* For ø10, only G is available.

⑤ Stroke adjustment unit symbol

For stroke adjustment units, refer to page 18.

⑥ Auto switch

Nil	ø10	Without auto switch (Built-in magnet for reed switch)
		Without auto switch (Built-in magnet for solid state switch) (Made to order: -X1810)
		ø16 to ø100 Without auto switch (Built-in magnet)

* Refer to the table below for the applicable auto switch model.

Applicable auto switches vary depending on the bore size. Select an applicable one referring to the table below.

Made to Order Common Specifications (For details, refer to page 114.)

Symbol	Specifications
-XB22	Shock absorber soft type RJ series mounted
-XC67 ^{*1}	NBR rubber lining in dust seal band
-X168	Helical insert thread specifications
-X1810	Magnet for ø10 solid state auto switch specifications

*1 Only ø16, ø20, ø50, and ø63 are available for the -XC67.

⑦ Number of auto switches

Nil	2
S	1
n	n

Applicable Auto Switches

Refer to the Web Catalog for further information on auto switches.

Type	Special function	Electrical entry	Indicator light	Wiring (Output)	Load voltage		Auto switch model			Lead wire length [m]				Pre-wired connector	Applicable load

Mechanically Jointed Rodless Cylinder Basic Type MY1B Series

Specifications

Bore size [mm]	10	16	20	25	32	40	50	63	80	100				
Fluid	Air													
Action	Double acting													
Operating pressure range	0.2 to 0.8 MPa	0.15 to 0.8 MPa	0.1 to 0.8 MPa											
Proof pressure	1.2 MPa													
Ambient and fluid temperatures	5 to 60°C													
Cushion	Rubber bumper	Air cushion												
Lubrication	Non-lube													
Stroke length tolerance	1000 or less ^{+1.8} ₀ 1001 to 3000 ^{+2.8} ₀	^{+1.8} ₀		2700 or less ^{+1.8} ₀ , 2701 to 5000 ^{+2.8} ₀										
Piping port size	Front/Side port Bottom port	M5 x 0.8			1/8	1/4	3/8	1/2	ø4		ø6	ø8	ø10	ø18

Piston Speed

Bore size [mm]	10	16	20 to 40	50 to 100
Without stroke adjustment unit	100 to 500 mm/s	100 to 1000 mm/s		
Stroke adjustment unit	A unit L unit and H unit	100 to 200 mm/s 100 to 1000 mm/s	100 to 1000 mm/s ^{*1} 100 to 1000 mm/s	— —
			100 to 1500 mm/s ^{*2}	

*1 Be aware that when the stroke adjustment range is increased with the adjustment bolt, the air cushion capacity decreases.

Also, when exceeding the air cushion stroke ranges on page 20, the piston speed should be 100 to 200 mm/s.

*2 The piston speed is 100 to 1000 mm/s for centralized piping.

* Use at a speed within the absorption capacity range. Refer to page 20.

* Due to the construction of this product, it may have more fluctuation in operating speed compared to a rod type air cylinder. For applications that require constant speed, select the equipment corresponding to the required level.

Stroke Adjustment Unit Specifications

80	5024	1004	1507	2009	2512	3014	3516	4019	
100	7850	1570	2355	3140	3925	4710	5495	6280	

* Theoretical output [N] = Pressure [MPa] x Piston area [mm²]

Weight

Bore size [mm]	Basic weight	Additional weight per each 50 mm of stroke	Weight of moving parts	Side support bracket weight (per set)	Stroke adjustment unit weight (per unit)			[kg]
					Type A and B	A unit weight	L unit weight	
10	0.15	0.04	0.03	0.003	0.003	0.01	—	0.02
16	0.61	0.06	0.07	0.01	0.04	0.04	—	
20	1.06	0.10	0.14	0.02	0.05	0.05	0.10	
25	1.14	0.11	0.21	0.02	0.06	0.10	0.18	
32	2.28	0.17	0.47	0.02	0.12	0.21	0.40	
40	3.11	0.25	0.91	0.04	0.23	0.32	0.49	
50	7.78	0.44	1.40	0.04	—	—	—	
63	13.10	0.70	2.20	0.08	—	—	—	
80	20.70	1.18	4.80	0.17	—	—	—	
100	35.70	1.97	8.20	0.17	—	—	—	

Calculation: (Example) MY1B20-300A

- Basic weight 1.06 kg
- Cylinder stroke 300 mm stroke
- Additional weight ... 0.10/50 mm stroke $1.06 + 0.10 \times 300/50 + 0.05 \times 2 \approx 1.76 \text{ kg}$
- Weight of A unit 0.05 kg

Precautions

For details on the MY1B Series Mechanically Jointed Rodless Cylinder, refer to "Specific Product Precautions" on pages 119 to 122.

Cushion Capacity

Cushion Selection

<Rubber bumper>

Rubber bumpers are a standard feature on MY1B10. Since the stroke absorption of rubber bumpers is short, when adjusting the stroke with an A unit, install an external shock absorber.

The load and speed range which can be absorbed by a rubber bumper is inside the rubber bumper limit line of the graph.

<Air cushion>

Air cushions are a standard feature on mechanically jointed rodless cylinders. (Except ø10)

The air cushion mechanism is incorporated to prevent excessive impact of the piston with high kinetic energy at the stroke end. The purpose of air cushion, thus, is not to decelerate the piston near the stroke end.

The ranges of load and speed that air cushions can absorb are within the air cushion limit lines shown in the graphs.

<Stroke adjustment unit with shock absorber>

Use this unit when operating with a load and speed exceeding the air cushion limit line, or when cushioning is required outside of the effective air cushion stroke range due to stroke adjustment.

L unit

Use this unit when cushioning is required outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line and below the L unit limit line.

H unit

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

* For details on stroke adjustment using the adjustment bolt, refer to page 121.

* Seal kit includes 29, 30, 31, 32, and 34. Order the seal kit based on each bore size.

* Seal kit includes a grease pack (10 g).

When 14 and 15 are shipped independently, a grease pack is included. (10 g per 1000 mm stroke)

Order with the following part number when only the grease pack is needed.

Grease pack part number: GR-S-010 (10 g), GR-S-020 (20 g)

* Two types of dust seal bands are available for the MY1B16, 20, 50, 63. Since the part number varies depending on the treatment of the hexagon socket head set screw 22, please check a proper dust seal band carefully.

A: Black zinc chromated → MY□□-16B-stroke, B: Chromated → MY□□-16BW-stroke

MY1B32	25	12	61	8.5	67	17	4.5	8 (Max. 20)	74
MY1B40	31	15	76	9.5	81.5	17	4.5	9 (Max. 25)	94

With low load shock absorber + Adjustment bolt

MY1B [Bore size] □ — Stroke L(Z)

ø16

*1 The clearance between the stroke adjustment unit height dimension (36.9 mm) and the slide table top height (37 mm) is very small, so there is a possibility of interference. For this reason, when mounting a workpiece that exceeds the overall length of the slide table, secure a clearance of 1 mm or more on the workpiece side.

Stroke Adjustment Units

With low load shock absorber + Adjustment bolt

MY1B Bore size — Stroke L(Z)

ø20

ø25 to ø40

Applicable cylinder	E	EA	EB	EC	EY	F	FB	FC	FH	FW	h	S	T	TT	W	Shock absorber model
MY1B25	20	10	49	6.5	53.5	6	33	13	12	46	3.5	46.7	7	5 (Max. 16.5)	60	RB1007

Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

⚠ Caution

- If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting it. Also, for long stroke operation involving vibration and impact, the use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
- Support brackets are not for mounting; use them solely for providing support.

Floating Brackets

Facilitates connection to other guide systems.

Applicable bore size

Ø50, Ø63

MY-J50/MY-J63

Application Example

Mounting Example

Model	Applicable cylinder	A	B	C	D	F	G	H
MY-J50	MY1B50□	110	110	55	70	126	90	37
MY-J63	MY1B63□	131	130	65	80	149	100	37

Model	Applicable cylinder	JJ	K	L	P	Q	E3	E4	LD
MY-J50	MY1B50□	M8 x 1.25	20	7.5	16	8	2.5	2.5	11
MY-J63	MY1B63□	M10 x 1.5	20	9.5	19	9.5	2.5	2.5	14

* Floating brackets consist of a set of right and left brackets.

* For details on how to secure the holding bolt, refer to page 120.

MY-J50, 63 (1 set) Component Parts

Description	Qty.	Material
Bracket	2	Carbon steel
Pin	2	Carbon steel
Conical spring washer	2	Carbon steel
Holding bolt	2	Chromium molybdenum steel

Applicable bore size

Ø80, Ø100

MY-J80/MY-J100

Application Example

Mounting Example

Support bracket mounting area is heat treated at HRC40 or above.

Model	Applicable cylinder	A	B (max.)	C (min.)
MY-J80	MY1B 80□	181	15	9
MY-J100	MY1B100□	221	15	9

- * Flat bar or round bar mounting are possible for the support bracket (slanted lines) mounted by the customer.
- * "B" and "C" indicate the allowable mounting dimensions for the support bracket (flat bar or round bar).
- * Consider support brackets with dimensions that allow the floating mechanism to function properly.

MY-J80, 100 (1 set) Component Parts

Description	Qty.	Material
Bracket	1	Rolled steel
Parallel pin	2	Carbon steel
Holding bolt	4	Chromium molybdenum steel

MY1M Series

Slide Bearing Guide Type

$\varnothing 16, \varnothing 20, \varnothing 25, \varnothing 32, \varnothing 40, \varnothing 50, \varnothing 63$

Simple guide type allows a workpiece to be mounted directly.

MY1M Series

Prior to Use

Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M1	M2	M3	m1	m2	m3
MY1M	16	6.0	3.0	1.0	18	7	2.1
	20	10	5.2	1.7	26	10.4	3
	25	15	9.0	2.4	38	15	4.5
	32	30	15	5.0	57	23	6.6
	40	59	24	8.0	84	33	10
	50	115	38	15	120	48	14
	63	140	60	19	180	72	21

The above values are the maximum values for allowable moment and load mass. Refer to each graph regarding the maximum allowable moment and maximum load mass for a particular piston speed.

Caution on Design

If the product is operated with a guide load factor which exceeds the standard value, malfunction may occur due to damage to the end cover and bearings. Therefore, be sure to confirm that the guide load factor is 1 or less.

Load mass (kg)

<Calculation of guide load factor>

1. Maximum load mass (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.
* To evaluate, use \bar{v}_a (average speed) for (1) and (2), and v (collision speed $v = 1.4\bar{v}_a$) for (3). Calculate m_{max} for (1) from the maximum load mass graph (m_1, m_2, m_3) and M_{max} for (2) and (3) from the maximum allowable moment graph (M_1, M_2, M_3).

$$\text{Sum of guide load factors } \Sigma\alpha = \frac{\text{Load mass (m)}}{\text{Maximum load mass (m max)}} + \frac{\text{Static moment (M)*1}}{\text{Allowable static moment (M max)}} + \frac{\text{Dynamic moment (M_E)*2}}{\text{Allowable dynamic moment (M_E max)}} \leq 1$$

*1 Moment caused by the load, etc., with cylinder in resting condition

*2 Moment caused by the load equivalent to impact at the stroke end (at the time of impact with stopper)

* Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ($\Sigma\alpha$) is the total of all such moments.

2. Reference formula [Dynamic moment at the time of impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

m: Load mass [kg]

F: Load [N]

F_E: Load equivalent to impact

(at the time of impact with stopper) [N]

\bar{v}_a : Average speed [mm/s]

M: Static moment [N·m]

$v = 1.4\bar{v}_a$ (mm/s) $F_E = 1.4\bar{v}_a \cdot \delta \cdot m \cdot g$

$\therefore M_E = \frac{1}{3} \cdot F_E \cdot L_1 = 4.57\bar{v}_a \delta m L_1$ [N·m]

v: Collision speed [mm/s]

L₁: Distance to the load center of gravity [m]

M_E: Dynamic moment [N·m]

δ : Bumper coefficient At collision: $v = 1.4\bar{v}_a$

With rubber bumper = 4/100

(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

g: Gravitational acceleration (9.8 m/s²)

*3 $1.4\bar{v}_a \delta$ is a dimensionless coefficient for calculating impact force.

*4 Average load coefficient (= $\frac{1}{3}$): For averaging the maximum load moment at the time of impact with stopper according to service life calculations

3. For detailed selection procedures, refer to pages 41 and 42.

Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum load mass value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the load mass for the selected conditions.

Maximum Load Mass

Select the load mass from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

Auto Switch Mounting

Made to Order Common Specifications

Specific Product Precautions

MY1M Series

Model Selection

Following are the steps for selecting the most suitable MY1M series to your application.

Calculation of Guide Load Factor

1. Operating Conditions

Cylinder MY1M40-500

Average operating speed V_a ... 200 mm/s

Mounting orientation Horizontal

Cushion Air cushion
($\delta = 1/100$)

W_a : Connection plate $t = 10$ (880 g)

MY1M40-500

2. Load Blocking

Mass and Center of Gravity for Each Workpiece

Workpiece no. W_n	Mass m_n	Center of gravity		
		X-axis X_n	Y-axis Y_n	Z-axis Z_n
W_a	0.88 kg	65 mm	0 mm	5 mm
W_b	4.35 kg	150 mm	0 mm	42.5 mm
W_c	0.795 kg	150 mm	111 mm	42.5 mm
W_d	0.5 kg	150 mm	210 mm	42.5 mm

$n = a, b, c, d$

3. Composite Center of Gravity Calculation

$$\begin{aligned} m_1 &= \sum m_n \\ &= 0.88 + 4.35 + 0.795 + 0.5 = 6.525 \text{ kg} \end{aligned}$$

$$\begin{aligned} X &= \frac{1}{m_1} \times \sum (m_n \times x_n) \\ &= \frac{1}{6.525} (0.88 \times 65 + 4.35 \times 150 + 0.795 \times 150 + 0.5 \times 150) = 138.5 \text{ mm} \end{aligned}$$

$$\begin{aligned} Y &= \frac{1}{m_1} \times \sum (m_n \times y_n) \\ &= \frac{1}{6.525} (0.88 \times 0 + 4.35 \times 0 + 0.795 \times 111 + 0.5 \times 210) = 29.6 \text{ mm} \end{aligned}$$

$$\begin{aligned} Z &= \frac{1}{m_1} \times \sum (m_n \times z_n) \\ &= \frac{1}{6.525} (0.88 \times 5 + 4.35 \times 42.5 + 0.795 \times 42.5 + 0.5 \times 42.5) = 37.4 \text{ mm} \end{aligned}$$

4. Calculation of Load Factor for Static Load

m_1 : Mass

$m_1 \max$ (from ① of graph MY1M/m₁) = 84 [kg]

Load factor $\alpha_1 = m_1/m_1 \max = 6.525/84 = 0.08$

M_1 : Moment

$M_1 \max$ (from ② of graph MY1M/M₁) = 59 [N·m]

$M_1 = m_1 \times g \times X = 6.525 \times 9.8 \times 138.5 \times 10^{-3} = 8.86 \text{ N}\cdot\text{m}$

Load factor $\alpha_2 = M_1/M_1 \max = 8.86/59 = 0.15$

M₂: Moment

M₂ max (from ③ of graph MY1M/M₂) = 24 [N·m]
 $M_3 = m_1 \times g \times Y = 6.525 \times 9.8 \times 29.6 \times 10^{-3} = 1.89$ [N·m]

Load factor $\alpha_3 = M_2/M_2 \text{ max} = 1.89/24 = 0.08$

5. Calculation of Load Factor for Dynamic Moment

Equivalent load F_E at impact

$F_E = 1.4v_a \times \delta \times m \times g = 1.4 \times 200 \times \frac{1}{100} \times 6.525 \times 9.8 = 179.1$ [N]

M_{1E}: Moment

M_{1E} max (from ④ of graph MY1M/M₁ where $1.4v_a = 280$ mm/s) = 42.1 [N·m]
 $M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 179.1 \times 37.4 \times 10^{-3} = 2.23$ [N·m]

Load factor $\alpha_4 = M_{1E}/M_{1E} \text{ max} = 2.23/42.1 = 0.05$

**M_{3E}:** Moment

M_{3E} max (from ⑤ of graph MY1M/M₃ where $1.4v_a = 280$ mm/s) = 5.7 [N·m]

$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 179.1 \times 29.6 \times 10^{-3} = 1.77$ [N·m]

Load factor $\alpha_5 = M_{3E}/M_{3E} \text{ max} = 1.77/5.7 = 0.31$

6. Sum and Examination of Guide Load Factors

$\sum \alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = 0.67 \leq 1$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors $\sum \alpha$ in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "Guide Cylinder Selection Software" on the SMC website.

Mechanically Jointed Rodless Cylinder

Slide Bearing Guide Type

MY1M Series

Ø16, Ø20, Ø25, Ø32, Ø40, Ø50, Ø63

How to Order

① Bore size

16	16 mm
20	20 mm
25	25 mm
32	32 mm
40	40 mm
50	50 mm
63	63 mm

② Port thread type

Symbol	Type	Bore size
Nil	M thread	ø16, ø20
	Rc	ø25, ø32, ø40, ø50, ø63
TN	NPT	
TF	G	

④ Cylinder stroke [mm]

Bore size	Standard stroke*1	Long stroke		Maximum manufacture stroke
		16	20, 25, 32, 40, 50, 63	
16	100, 200, 300, 400, 500, 600, 700, 800, 900, 1000, 1200, 1400, 1600, 1800, 2000	Strokes of 2001 to 3000 mm (1 mm increments) exceeding the standard stroke		3000
20, 25, 32, 40, 50, 63	*1 The stroke can be manufactured in 1 mm increments from 1 mm stroke.	Strokes of 2001 to 5000 mm (1 mm increments) exceeding the standard stroke		5000

③ Piping

Nil	Standard type
G	Centralized piping type

Ordering example

* Long stroke can be ordered the same as the standard stroke. MY1M20-3000L-M9BW

* Please be advised that with a stroke of 49 mm or less, there are cases where auto switch mounting is not possible, and the performance of the air cushion may decline.

⑤ Stroke adjustment unit symbol

For stroke adjustment units, refer to page 44.

⑥ Auto switch

Nil	Without auto switch (Built-in magnet)
Applicable auto switches vary depending on the bore size. Select an applicable one referring to the table below.	

⑦ Number of auto switches

Nil	2
S	1
n	n

⑧ Made to Order Common Specifications

Refer to page 44 for details.

Applicable Auto Switches/Refer to the Web Catalog for further information on auto switches.

*1 Water-resistant type auto switches can be mounted on the above models, but SMC cannot guarantee water resistance.

Please contact SMC regarding water-resistant types with the above model numbers.

*2 The type with a 1 m lead wire and the type with a pre-wired connector are only applicable to the D-A9.

*3 The type with a 5 m lead wire is only applicable to the D-A9 and D-Z73.

*4 The load voltage used is 24 VDC.

* For details on auto switch mounting brackets and part numbers, refer to page 112.

* Lead wire length symbols: 0.5 m Nil (Example) M9NW
1 m M (Example) M9NWM

3 m L (Example) M9NLW
5 m Z (Example) M9NWZ

* Auto switches marked with "O" are produced upon receipt of order.

* Since there are applicable auto switches other than those listed above, refer to page 112 for details.

* Auto switches are shipped together with the product but do not come assembled. (Refer to page 109 for the details of auto switch mounting.)

Mechanically Jointed Rodless Cylinder Slide Bearing Guide Type MY1M Series

Made to Order Common Specifications
(For details, refer to page 114.)

Symbol	Specifications
-XB22 ^{*1}	Shock absorber soft type RJ series mounted
-XC67	NBR rubber lining in dust seal band
-X168	Helical insert thread specifications

*1 Excludes ø50 and ø63 for the -XB22

Specifications

Bore size [mm]	16	20	25	32	40	50	63
Fluid				Air			
Action				Double acting			
Operating pressure range	0.2 to 0.8 MPa			0.15 to 0.8 MPa			
Proof pressure				1.2 MPa			
Ambient and fluid temperatures				5 to 60°C			
Cushion				Air cushion			
Lubrication				Non-lube			
Stroke length tolerance	1000 or less ^{+1.8} ₀ 1001 to 3000 ^{+2.8} ₀			2700 or less ^{+1.8} ₀ , 2701 to 5000 ^{+2.8} ₀			
Piping port size	Front/Side port Bottom port	M5 x 0.8 ø4		1/8 ø6	1/4 ø8	3/8 ø10	

Piston Speed

	Bore size [mm]	16 to 63
Without stroke adjustment unit		100 to 1000 mm/s
Stroke adjustment unit	A unit	100 to 1000 mm/s ^{*1}
	L unit and H unit	100 to 1500 mm/s ^{*2}

*1 Be aware that when the stroke adjustment range is increased with the adjustment bolt, the air cushion capacity decreases. Also, when exceeding the air cushion stroke ranges on page 46, the piston speed should be 100 to 200 mm/s.

*2 The piston speed is 100 to 1000 mm/s for centralized piping.

* Use at a speed within the absorption capacity range. Refer to page 46.

* Due to the construction of this product, it may have more fluctuation in operating speed compared to a rod type air cylinder. For applications that require constant speed, select the equipment corresponding to the required level.

50	10.06	0.77	2.51	0.08	0.36	0.51	0.81	
63	16.57	1.11	3.99	0.17	0.68	0.83	1.08	

Calculation: (Example) MY1M25-300A

- Basic weight 1.64 kg
- Cylinder stroke 300 mm stroke
- Additional weight 0.24/50 mm stroke
1.64 + 0.24 x 300/50 + 0.07 x 2 ≈ 3.22 kg
- Weight of A unit 0.07 kg

Precautions

For details on the MY1M Series Mechanically Jointed Rodless Cylinder, refer to "Specific Product Precautions" on pages 119 to 122.

Cushion Capacity

Cushion Selection

<Air cushion>

Air cushions are a standard feature on mechanically jointed rodless cylinders. The air cushion mechanism is incorporated to prevent excessive impact of the piston with high kinetic energy at the stroke end. The purpose of air cushion, thus, is not to decelerate the piston near the stroke end. The ranges of load and speed that air cushions can absorb are within the air cushion limit lines shown in the graphs.

<Stroke adjustment unit with shock absorber>

Use this unit when operating with a load and speed exceeding the air cushion limit line, or when cushioning is required outside of the effective air cushion stroke range due to stroke adjustment.

L unit

Use this unit when cushioning is required outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line and below the L unit limit line.

H unit

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

* For details on stroke adjustment using the adjustment bolt, refer to page 121.

* Seal kit includes ⑯, ⑰, ⑱, ⑲, and ⑳. Order the seal kit based on each bore size.

* Seal kit includes a grease pack (10 g).

When ⑯ and ⑰ are shipped independently, a grease pack is included. (10 g per 1000 mm stroke)

Order with the following part number when only the grease pack is needed.

Grease pack part number: GR-S-010 (10 g), GR-S-020 (20 g)

* Two types of dust seal bands are available. Since the part number varies depending on the treatment of the hexagon socket head set screw ⑳, please check a proper dust seal band carefully.

A: Black zinc chromated → MY□□-16B-stroke, B: Chromated → MY□□-16BW-stroke

Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

Caution

- If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting it. Also, for long stroke operation involving vibration and impact, the use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
- Support brackets are not for mounting; use them solely for providing support.

MY1C Series

Prior to Use

Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M1	M2	M3	m1	m2	m3
MY1C	16	6.0	3.0	2.0	18	7	2.1
	20	10	5.0	3.0	25	10	3
	25	15	8.5	5.0	35	14	4.2
	32	30	14	10	49	21	6
	40	60	23	20	68	30	8.2
	50	115	35	35	93	42	11.5
	63	150	50	50	130	60	16

The above values are the maximum values for allowable moment and load mass. Refer to each graph regarding the maximum allowable moment and maximum load mass for a particular piston speed.

⚠ Caution on Design

If the product is operated with a guide load factor which exceeds the standard value, malfunction may occur due to damage to the cam follower. Therefore, be sure to confirm that the guide load factor is 1 or less.

Load mass (kg)

<Calculation of guide load factor>

1. Maximum load mass (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.
* To evaluate, use \bar{U}_a (average speed) for (1) and (2), and U (collision speed $U = 1.4\bar{U}_a$) for (3). Calculate m_{max} for (1) from the maximum load mass graph (m_1, m_2, m_3) and M_{max} for (2) and (3) from the maximum allowable moment graph (M_1, M_2, M_3).

$$\text{Sum of guide load factors } \Sigma\alpha = \frac{\text{Load mass (m)}}{\text{Maximum load mass (m}_{max})} + \frac{\text{Static moment (M)}^{*1}}{\text{Allowable static moment (M}_{max})} + \frac{\text{Dynamic moment (M}_{E})^{*2}}{\text{Allowable dynamic moment (M}_{E,max})} \leq 1$$

*1 Moment caused by the load, etc., with cylinder in resting condition

*2 Moment caused by the load equivalent to impact at the stroke end (at the time of impact with stopper)

* Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ($\Sigma\alpha$) is the total of all such moments.

2. Reference formula [Dynamic moment at the time of impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

m: Load mass [kg]

F: Load [N]

F_E: Load equivalent to impact
(at the time of impact with stopper) [N]

U_a: Average speed [mm/s]

M: Static moment [N·m]

U = 1.4U_a (mm/s) $F_E = 1.4U_a \cdot \delta \cdot m \cdot g^{*3}$

$\therefore M_E = \frac{1}{3} \cdot F_E \cdot L_1 = 4.57 U_a \delta m L_1 [N \cdot m]$

U: Collision speed [mm/s]

L₁: Distance to the load center of gravity [m]

M_E: Dynamic moment [N·m]

δ: Bumper coefficient At collision: $U = 1.4\bar{U}_a$

With rubber bumper = 4/100

(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

g: Gravitational acceleration (9.8 m/s²)

*3 1.4U_aδ is a dimensionless coefficient for calculating impact force.

*4 Average load coefficient ($\frac{1}{3}$): For averaging the maximum load moment at the time of impact with stopper according to service life calculations

3. For detailed selection procedures, refer to pages 59 and 60.

Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum load mass value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the load mass for the selected conditions.

Maximum Load Mass

Select the load mass from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

Specific Product Precautions

MY1C Series

Model Selection

Following are the steps for selecting the most suitable MY1C series to your application.

Calculation of Guide Load Factor

1. Operating Conditions

Cylinder..... MY1C40-500

Average operating speed v_a ... 300 mm/s

Mounting orientation..... Bottom

Cushion..... Air cushion

($\delta = 1/100$)

For actual examples of calculation for each orientation, refer to the pages above.

2. Load Blocking

Mass and Center of Gravity for Each Workpiece

Workpiece no. W _n	Mass m _n	Center of gravity		
		X-axis X _n	Y-axis Y _n	Z-axis Z _n
W _a	0.88 kg	65 mm	0 mm	5 mm
W _b	4.35 kg	150 mm	0 mm	42.5 mm
W _c	0.795 kg	150 mm	111 mm	42.5 mm
W _d	0.5 kg	150 mm	210 mm	42.5 mm

n = a, b, c, d

3. Composite Center of Gravity Calculation

$$\begin{aligned} m_2 &= \sum m_n \\ &= 0.88 + 4.35 + 0.795 + 0.5 = 6.525 \text{ kg} \end{aligned}$$

$$\begin{aligned} X &= \frac{1}{m_2} \times \sum (m_n \times x_n) \\ &= \frac{1}{6.525} (0.88 \times 65 + 4.35 \times 150 + 0.795 \times 150 + 0.5 \times 150) = 138.5 \text{ mm} \end{aligned}$$

$$\begin{aligned} Y &= \frac{1}{m_2} \times \sum (m_n \times y_n) \\ &= \frac{1}{6.525} (0.88 \times 0 + 4.35 \times 0 + 0.795 \times 111 + 0.5 \times 210) = 29.6 \text{ mm} \end{aligned}$$

$$\begin{aligned} Z &= \frac{1}{m_2} \times \sum (m_n \times z_n) \\ &= \frac{1}{6.525} (0.88 \times 5 + 4.35 \times 42.5 + 0.795 \times 42.5 + 0.5 \times 42.5) = 37.4 \text{ mm} \end{aligned}$$

4. Calculation of Load Factor for Static Load

m₂: Mass

m₂ max (from ① of graph MY1C/m₂) = 30 [kg]

Load factor $\alpha_1 = m_2/m_2 \text{ max} = 6.525/30 = 0.22$

M₁: Moment

M₁ max (from ② of graph MY1C/M₁) = 60 [N·m]

M₁ = m₂ × g × X = 6.525 × 9.8 × 138.5 × 10⁻³ = 8.86 [N·m]

Load factor $\alpha_2 = M_1/M_1 \text{ max} = 8.86/60 = 0.15$

M₂: Moment**M_{2 max}** (from ③ of graph MY1C/M₂) = 23.0 [N·m]

$$M_2 = m_2 \times g \times Y = 6.525 \times 9.8 \times 29.6 \times 10^{-3} = 1.89 \text{ [N·m]}$$

$$\text{Load factor } \alpha_3 = M_2 / M_2 \text{ max} = 1.89 / 23.0 = 0.08$$

5. Calculation of Load Factor for Dynamic Moment

Equivalent load F_E at impact

$$F_E = 1.4v_a \times \delta \times m \times g = 1.4 \times 300 \times \frac{1}{100} \times 6.525 \times 9.8 = 268.6 \text{ [N]}$$

M_{1E}: Moment**M_{1E max}** (from ④ of graph MY1C/M₁ where 1.4v_a = 420 mm/s) = 42.9 [N·m]

$$M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 268.6 \times 37.4 \times 10^{-3} = 3.35 \text{ [N·m]}$$

$$\text{Load factor } \alpha_4 = M_{1E} / M_{1E} \text{ max} = 3.35 / 42.9 = 0.08$$

**M_{3E}:** Moment**M_{3E max}** (from ⑤ of graph MY1C/M₃ where 1.4v_a = 420 mm/s) = 14.3 [N·m]

$$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 268.6 \times 29.6 \times 10^{-3} = 2.65 \text{ [N·m]}$$

$$\text{Load factor } \alpha_5 = M_{3E} / M_{3E} \text{ max} = 2.65 / 14.3 = 0.19$$

6. Sum and Examination of Guide Load Factors

$$\sum \alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = 0.72 \leq 1$$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors $\sum \alpha$ in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "Guide Cylinder Selection Software" on the SMC website.

*1 Water-resistant type auto switches can be mounted on the above models, but SMC cannot guarantee water resistance.

Please contact SMC regarding water-resistant types with the above model numbers.

*2 The type with a 1 m lead wire and the type with a pre-wired connector are only applicable to the D-A9.

*3 The type with a 5 m lead wire is only applicable to the D-A9 and D-Z73.

*4 The load voltage used is 24 VDC.

* For details on auto switch mounting brackets and part numbers, refer to page 112.

* Lead wire length symbols: 0.5 m Nil (Example) M9NW

1 m M (Example) M9NWV

3 m L (Example) M9NWL

5 m Z (Example) M9NZW

* Auto switches marked with "○" are produced upon receipt of order.

* Auto switch mounting brackets (BMG2-012) are separately required to retrofit auto switches (M9 type) on ø25 to ø63 cylinders.

* Since there are applicable auto switches other than those listed above, refer to page 112 for details.

* Auto switches are shipped together with the product but do not come assembled. (Refer to page 109 for the details of auto switch mounting.)

Mechanically Jointed Rodless Cylinder Cam Follower Guide Type MY1C Series

Made to Order

Made to Order Common Specifications
(For details, refer to page 114.)

Piston Speed

Bore size [mm]		16 to 63
Without stroke adjustment unit		100 to 1000 mm/s
Stroke	A unit	100 to 1000 mm/s ^{*1}
adjustment unit	L unit and H unit	100 to 1500 mm/s ^{*2}

*1 Be aware that when the stroke adjustment range is increased with the adjustment bolt, the air cushion capacity decreases. Also, when exceeding the air cushion stroke ranges on page 64, the piston speed should be 100 to 200 mm/s.

*2 The piston speed is 100 to 1000 mm/s for centralized piping.

* Use at a speed within the absorption capacity range. Refer to page 64.

* Due to the construction of this product, it may have more fluctuation in operating speed compared to a rod type air cylinder. For applications that require constant speed, select the equipment corresponding to the required level.

63	3115	623	934	1246	1557	1869	2180	2492	

* Theoretical output [N] = Pressure [MPa] x Piston area [mm²]

Weight

Bore size [mm]	Basic weight	Additional weight per each 50 mm of stroke	Weight of moving parts	Side support bracket weight (per set)	Stroke adjustment unit weight (per unit)			[kg]
					Type A and B	A unit weight	L unit weight	
16	0.67	0.12	0.22	0.01	0.03	0.04	—	
20	1.06	0.15	0.31	0.02	0.04	0.05	0.08	
25	1.58	0.24	0.41	0.02	0.07	0.11	0.18	
32	3.14	0.37	0.86	0.04	0.14	0.23	0.39	
40	5.60	0.52	1.49	0.08	0.25	0.34	0.48	
50	10.14	0.76	2.59	0.08	0.36	0.51	0.81	
63	16.67	1.10	4.26	0.17	0.68	0.83	1.08	

Calculation: (Example) MY1C25-300A

- Basic weight 1.58 kg
- Cylinder stroke 300 mm stroke
- Additional weight 0.24/50 mm stroke
 $1.58 + 0.24 \times 300/50 + 0.07 \times 2 \approx 3.16 \text{ kg}$
- Weight of A unit 0.07 kg

⚠ Precautions

For details on the MY1C Series Mechanically Jointed Rodless Cylinder, refer to "Specific Product Precautions" on pages 119 to 122.

Cushion Capacity

Cushion Selection

<Air cushion>

Air cushions are a standard feature on mechanically jointed rodless cylinders.

The air cushion mechanism is incorporated to prevent excessive impact of the piston with high kinetic energy at the stroke end. The purpose of air cushion, thus, is not to decelerate the piston near the stroke end.

The ranges of load and speed that air cushions can absorb are within the air cushion limit lines shown in the graphs.

<Stroke adjustment unit with shock absorber>

Use this unit when operating with a load and speed exceeding the air cushion limit line, or when cushioning is required outside of the effective air cushion stroke range due to stroke adjustment.

L unit

Use this unit when cushioning is required outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line and below the L unit limit line.

H unit

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

* For details on stroke adjustment using the adjustment bolt, refer to page 121.

* Seal kit includes 25, 29, 30, 31, and 43. Order the seal kit based on each bore size.

* Seal kit includes a grease pack (10 g).

When 15 and 16 are shipped independently, a grease pack is included. (10 g per 1000 mm stroke)

Order with the following part number when only the grease pack is needed.

Grease pack part number: GR-S-010 (10 g), GR-S-020 (20 g)

* Two types of dust seal bands are available. Since the part number varies depending on the treatment of the hexagon socket head set screw 37, please check a proper dust seal band carefully.

A: Black zinc chromated → MY□□-16B-stroke, B: Chromated → MY□□-16BW-stroke

* Side supports consist of a set of right and left brackets.

Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

Caution

- If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting it. Also, for long stroke operation involving vibration and impact, the use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
- Support brackets are not for mounting; use them solely for providing support.

MY1H Series

Linear Guide Type

$\varnothing 10, \varnothing 16, \varnothing 20, \varnothing 25, \varnothing 32, \varnothing 40$

Uses a linear guide to achieve high repeatability

MY1H Series

Prior to Use

Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M ₁	M ₂	M ₃	m ₁	m ₂	m ₃
MY1H	10	0.8	1.1	0.8	6.1	6.1	6.1
	16	3.7	4.9	3.7	10.8	10.8	10.8
	20	11	16	11	17.6	17.6	17.6
	25	23	26	23	27.5	27.5	27.5
	32	39	50	39	39.2	39.2	39.2
	40	50	50	39	50	50	50

The above values are the maximum values for allowable moment and load mass. Refer to each graph regarding the maximum allowable moment and maximum load mass for a particular piston speed.

Caution on Design

If the product is operated with a guide load factor which exceeds the standard value, malfunction may occur due to damage to the guide portion. Therefore, be sure to confirm that the guide load factor is 1 or less.

Load mass (kg)

Moment (N·m)

<Calculation of guide load factor>

1. Maximum load mass (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.

* To evaluate, use \bar{v}_a (average speed) for (1) and (2), and v (collision speed $v = 1.4\bar{v}_a$) for (3). Calculate m_{max} for (1) from the maximum load mass graph (m_1, m_2, m_3) and M_{max} for (2) and (3) from the maximum allowable moment graph (M_1, M_2, M_3).

$$\text{Sum of guide load factors } \Sigma \alpha = \frac{\text{Load mass (m)}}{\text{Maximum load mass (m}_{max})} + \frac{\text{Static moment (M)}^{*1}}{\text{Allowable static moment (M}_{max})} + \frac{\text{Dynamic moment (M}_{E\max})^{*2}}{\text{Allowable dynamic moment (M}_{E\max})} \leq 1$$

*1 Moment caused by the load, etc., with cylinder in resting condition

*2 Moment caused by the load equivalent to impact at the stroke end (at the time of impact with stopper)

* Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ($\Sigma \alpha$) is the total of all such moments.

2. Reference formula [Dynamic moment at the time of impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

m: Load mass [kg]

F: Load [N]

F_E: Load equivalent to impact

(at the time of impact with stopper) [N]

v_a: Average speed [mm/s]

M: Static moment [N·m]

$$v = 1.4v_a \text{ (mm/s)} \quad F_E = 1.4v_a \delta \cdot m^{*3}$$

$$\therefore M_E = \frac{1}{3} \cdot F_E \cdot L_1 = 4.57v_a \delta m L_1 \text{ [N·m]}$$

v: Collision speed [mm/s]

L₁: Distance to the load center of gravity [m]

M_E: Dynamic moment [N·m]

δ: Bumper coefficient

With rubber bumper = 4/100
(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

g: Gravitational acceleration (9.8 m/s²)

*3 $1.4v_a \delta$ is a dimensionless coefficient for calculating impact force.

*4 Average load coefficient ($\frac{1}{3}$): For averaging the maximum load moment at the time of impact with stopper according to service life calculations

3. For detailed selection procedures, refer to pages 75 and 76.

Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum load mass value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the load mass for the selected conditions.

Maximum Load Mass

Select the load mass from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

Auto Switch Mounting

Made to Order Common Specifications

Specific Product Precautions

MY1H Series

Model Selection

Following are the steps for selecting the most suitable MY1H series to your application.

Calculation of Guide Load Factor

1. Operating Conditions

Operating cylinder MY1H20-500

Average operating speed v_a ... 300 mm/s

Mounting orientation Wall

Cushion Air cushion ($\delta = 1/100$)

For actual examples of calculation for each orientation, refer to the pages above.

2. Load Blocking

Mass and Center of Gravity for Each Workpiece

Workpiece no. W_n	Mass m_n	Center of gravity		
		X-axis X_n	Y-axis Y_n	Z-axis Z_n
W_a	0.44 kg	60 mm	0 mm	5 mm
W_b	2.0 kg	100 mm	0 mm	40 mm
W_c	0.280 kg	100 mm	90 mm	40 mm
W_d	0.2 kg	100 mm	189 mm	40 mm

$n = a, b, c, d$

3. Composite Center of Gravity Calculation

$$\begin{aligned} m_3 &= \sum m_n \\ &= 0.44 + 2.0 + 0.280 + 0.2 = 2.92 \text{ kg} \end{aligned}$$

$$\begin{aligned} X &= \frac{1}{m_3} \times \sum (m_n \times X_n) \\ &= \frac{1}{2.92} (0.44 \times 60 + 2.0 \times 100 + 0.280 \times 100 + 0.2 \times 100) = 94.0 \text{ mm} \end{aligned}$$

$$\begin{aligned} Y &= \frac{1}{m_3} \times \sum (m_n \times Y_n) \\ &= \frac{1}{2.92} (0.44 \times 0 + 2.0 \times 0 + 0.280 \times 90 + 0.2 \times 189) = 21.6 \text{ mm} \end{aligned}$$

$$\begin{aligned} Z &= \frac{1}{m_3} \times \sum (m_n \times Z_n) \\ &= \frac{1}{2.92} (0.44 \times 5 + 2.0 \times 40 + 0.280 \times 40 + 0.2 \times 40) = 34.8 \text{ mm} \end{aligned}$$

4. Calculation of Load Factor for Static Load

m_3 : Mass

$m_3 \text{ max}$ (from ① of graph MY1H/ m_3) = 17.6 [kg]

Load factor $\alpha_1 = m_3 / m_3 \text{ max} = 2.92 / 17.6 = 0.17$

M_2 : Moment

$M_2 \text{ max}$ (from ② of graph MY1H/ M_2) = 16.0 [N·m]

$M_2 = m_3 \times g \times Z = 2.92 \times 9.8 \times 34.8 \times 10^{-3} = 1.00 \text{ [N·m]}$

Load factor $\alpha_2 = M_2 / M_2 \text{ max} = 1.00 / 16.0 = 0.07$

M₃: Moment**M₃ max** (from ③ of graph MY1H/M₃) = 11.0 [N·m]

$$M_3 = m_3 \times g \times X = 2.92 \times 9.8 \times 94.0 \times 10^{-3} = 2.69 \text{ [N·m]}$$

$$\text{Load factor } \alpha_3 = M_3 / M_3 \text{ max} = 2.69 / 11.0 = 0.25$$

5. Calculation of Load Factor for Dynamic Moment

Equivalent load F_E at impact

$$F_E = 1.4U_a \times \delta \times m \times g = 1.4 \times 300 \times \frac{1}{100} \times 2.92 \times 9.8 = 120.2 \text{ [N]}$$

M_{1E}: Moment**M_{1E} max** (from ④ of graph MY1H/M₁ where 1.4U_a = 420 mm/s) = 7.9 [N·m]

$$M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 120.2 \times 34.8 \times 10^{-3} = 1.40 \text{ [N·m]}$$

$$\text{Load factor } \alpha_4 = M_{1E} / M_{1E} \text{ max} = 1.40 / 7.9 = 0.18$$

**M_{3E}:** Moment**M_{3E} max** (from ⑤ of graph MY1H/M₃ where 1.4U_a = 420 mm/s) = 7.9 [N·m]

$$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 120.2 \times 21.6 \times 10^{-3} = 0.87 \text{ [N·m]}$$

$$\text{Load factor } \alpha_5 = M_{3E} / M_{3E} \text{ max} = 0.87 / 7.9 = 0.12$$

6. Sum and Examination of Guide Load Factors

$$\sum \alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = 0.79 \leq 1$$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors $\sum \alpha$ in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "Guide Cylinder Selection Software" on the SMC website.

Stroke adjustment unit	A unit		100 to 1000 mm/s ^{*1}
	L unit and H unit	100 to 1000 mm/s	100 to 1500 mm/s ^{*2}

*1 Be aware that when the stroke adjustment range is increased with the adjustment bolt, the air cushion capacity decreases. Also, when exceeding the air cushion stroke ranges on page 80, the piston speed should be 100 to 200 mm/s.

*2 The piston speed is 100 to 1000 mm/s for centralized piping.

* Use at a speed within the absorption capacity range. Refer to page 80.

Stroke Adjustment Unit Specifications

* Intermediate fixing spacer is not available for end lock mounting side.

* Spacers are used to fix the stroke adjustment unit at an intermediate stroke position.

For details on spacers and stroke adjustment units, refer to "Accessory Brackets (Option)" on page 96.

* For precautions, refer to page 121.

Accessory Brackets (Option)

Stroke adjustment unit	p. 96
Side support	p. 97

Refer to pages 109 to 112 for the specifications with auto switch.

Stroke adjustment unit mounting diagram

Place the protruding section on the stroke adjustment unit side.

Example of L6L7 attachment

MY1H Series

Shock Absorbers for L and H Units

Type	Stroke adjustment unit	Bore size [mm]					
		10	16	20	25	32	40
Standard (Shock absorber/ RB series)	L	—	RB0806	RB1007	RB1412		
	H	RB0805	—	RB1007	RB1412	RB2015	
Shock absorber/soft type RJ series mounted (-XB22)	L	—	RJ0806H	RJ1007H	RJ1412H		
	H	RJ0805	—	RJ1007H	RJ1412H	—	—

* The shock absorber service life is different from that of the MY1H cylinder depending on operating conditions. Refer to the RB/RJ Series Specific Product Precautions for the replacement period.

* Shock absorber soft type RJ series mounted (-XB22) is made-to-order common specifications. For details, refer to page 115.

Shock Absorber Specifications

Model		RB 0805	RB 0806	RB 1007	RB 1412	RB 2015
Max. absorbed energy [J]		1.0	2.9	5.9	19.6	58.8
Stroke absorption [mm]		5	6	7	12	15
Max. collision speed [mm/s]		1000	1500	1500	1500	1500
Max. operating frequency [cycle/min]		80	80	70	45	25
Spring force [N]	Extended	1.96	1.96	4.22	6.86	8.34
	Retracted	3.83	4.22	6.86	15.98	20.50
Operating temperature range [°C]		5 to 60				

* The shock absorber service life is different from that of the MY1H cylinder depending on operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

Theoretical Output

Bore size [mm]	Piston area [mm²]	Operating pressure [MPa]							[N]
		0.2	0.3	0.4	0.5	0.6	0.7	0.8	
10	78	15	23	31	39	46	54	62	
16	200	40	60	80	100	120	140	160	
20	314	62	94	125	157	188	219	251	
25	490	98	147	196	245	294	343	392	
32	804	161	241	322	402	483	563	643	
40	1256	251	377	502	628	754	879	1005	

* Theoretical output [N] = Pressure [MPa] x Piston area [mm²]

Weight

Bore size [mm]	Basic weight	Additional weight per each 50 mm of stroke	Weight of moving parts	Side support bracket weight (per set)	Stroke adjustment unit weight (per unit)			[kg]
					Type A and B	A unit weight	L unit weight	
10	0.26	0.08	0.05	0.003	—	—	0.02	
16	0.74	0.14	0.19	0.01	0.02	0.04	—	
20	1.35	0.25	0.40	0.02	0.03	0.05	0.07	
25	2.17	0.30	0.73	0.02	0.04	0.07	0.11	
32	4.37	0.46	1.30	0.04	0.08	0.14	0.23	
40	5.84	0.55	1.89	0.08	0.12	0.19	0.28	

Calculation: (Example) MY1H20-300A

- Basic weight 1.35 kg
- Cylinder stroke 300 mm stroke
- Additional weight 0.25/50 mm stroke
1.35 + 0.25 x 300/50 + 0.03 x 2 ≈ 2.19 kg
- Weight of A unit 0.03 kg

With End Lock

Specifications

Bore size [mm]	16	20	25	32	40
Lock position	One end (Selectable), Both ends				
Holding force (Max.) [N]	110	170	270	450	700
Fine stroke adjustment range [mm]	0 to -5.6	0 to -6	0 to -11.5	0 to -12	0 to -16
Backlash	1 mm or less				
Manual release	Possible (Non-lock type)				

Refer to page 123 in "Specific Product Precautions" for the product MY1H with end lock function.

Precautions

For details on the MY1H Series Mechanically Jointed Rodless Cylinder, refer to "Specific Product Precautions" on pages 119 to 123.

Cushion Capacity

Cushion Selection

<Rubber bumper>

Rubber bumpers are a standard feature on MY1H10.

Since the stroke absorption of rubber bumpers is short, when adjusting the stroke with an A unit, install an external shock absorber.

The load and speed range which can be absorbed by a rubber bumper is inside the rubber bumper limit line of the graph.

<Air cushion>

Air cushions are a standard feature on mechanically jointed rodless cylinders. (Except ø10)

The air cushion mechanism is incorporated to prevent excessive impact of the piston with high kinetic energy at the stroke end. The purpose of air cushion, thus, is not to decelerate the piston near the stroke end.

The ranges of load and speed that air cushions can absorb are within the air cushion limit lines shown in the graphs.

<Stroke adjustment unit with shock absorber>
Use this unit when operating with a load and speed exceeding the air cushion limit line, or when cushioning is required outside of the effective air cushion stroke range due to stroke adjustment.

L unit

Use this unit when cushioning is required outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line and below the L unit limit line.

H unit

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

* For details on stroke adjustment using the adjustment bolt, refer to page 121.

* Side supports consist of a set of right and left brackets.

Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

Caution

- If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting it. Also, for long stroke operation involving vibration and impact, the use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
- Support brackets are not for mounting; use them solely for providing support.

MY1HT Series

High Rigidity/Linear Guide Type

Ø50, Ø63

The use of two linear guides allows a maximum load of 320 kg. (Ø63)

Rodless cylinder

MY1HT Series

Prior to Use

Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M ₁	M ₂	M ₃	m ₁	m ₂	m ₃
MY1HT	50	140	180	140	200	140	200
	63	240	300	240	320	220	320

The above values are the maximum values for allowable moment and load mass. Refer to each graph regarding the maximum allowable moment and maximum load mass for a particular piston speed.

Caution on Design

If the product is operated with a guide load factor which exceeds the standard value, malfunction may occur due to damage to the guide portion. Therefore, be sure to confirm that the guide load factor is 1 or less.

Load mass (kg)

Moment (N·m)

<Calculation of guide load factor>

1. Maximum load mass (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.

* To evaluate, use \bar{v}_a (average speed) for (1) and (2), and v (collision speed $v = 1.4\bar{v}_a$) for (3). Calculate m max for (1) from the maximum load mass graph (m_1, m_2, m_3) and M max for (2) and (3) from the maximum allowable moment graph (M_1, M_2, M_3).

$$\text{Sum of guide load factors } \Sigma\alpha = \frac{\text{Load mass (m)}}{\text{Maximum load mass (m max)}} + \frac{\text{Static moment (M)}^{*1}}{\text{Allowable static moment (M max)}} + \frac{\text{Dynamic moment (M}_E)^{*2}}{\text{Allowable dynamic moment (M}_E\text{ max)}} \leq 1$$

*1 Moment caused by the load, etc., with cylinder in resting condition

*2 Moment caused by the load equivalent to impact at the stroke end (at the time of impact with stopper)

* Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ($\Sigma\alpha$) is the total of all such moments.

2. Reference formula [Dynamic moment at the time of impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

m: Load mass [kg]

F: Load [N]

F_E: Load equivalent to impact

(at the time of impact with stopper) [N]

v_a: Average speed [mm/s]

M: Static moment [N·m]

$$F_E = 1.4v_a \cdot \delta \cdot m^{*3}$$

$$\therefore M_E = \frac{1}{3} \cdot F_E \cdot L_1 = 4.57v_a \delta m L_1^{*4}$$

v: Collision speed [mm/s]

L₁: Distance to the load center of gravity [m]

M_E: Dynamic moment [N·m]

δ: Bumper coefficient

With rubber bumper = 4/100
(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

g: Gravitational acceleration (9.8 m/s²)

*3 $1.4v_a \delta$ is a dimensionless coefficient for calculating impact force.

*4 Average load coefficient ($= \frac{1}{3}$): For averaging the maximum load moment at the time of impact with stopper according to service life calculations

3. For detailed selection procedures, refer to pages 101 and 102.

Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum load mass value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the load mass for the selected conditions.

Maximum Load Mass

Select the load mass from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

Auto Switch Mounting

Made to Order Common Specifications

Specific Product Precautions

MY1HT Series

Model Selection

Following are the steps for selecting the most suitable MY1HT series to your application.

Calculation of Guide Load Factor

1. Operating Conditions

For actual examples of calculation for each orientation, refer to the pages above.

2. Load Blocking

Mass and Center of Gravity for Each Workpiece

Workpiece no. W_n	Mass m_n	Center of gravity		
		X-axis X_n	Y-axis Y_n	Z-axis Z_n
W_a	0.88 kg	65 mm	0 mm	5 mm
W_b	4.35 kg	150 mm	0 mm	42.5 mm
W_c	0.795 kg	150 mm	111 mm	42.5 mm
W_d	0.5 kg	150 mm	210 mm	42.5 mm

$n = a, b, c, d$

3. Composite Center of Gravity Calculation

$$\begin{aligned} m_4 &= \sum m_n \\ &= 0.88 + 4.35 + 0.795 + 0.5 = 6.525 \text{ kg} \end{aligned}$$

$$\begin{aligned} X &= \frac{1}{m_4} \times \sum (m_n \times X_n) \\ &= \frac{1}{6.525} (0.88 \times 65 + 4.35 \times 150 + 0.795 \times 150 + 0.5 \times 150) = 138.5 \text{ mm} \end{aligned}$$

$$\begin{aligned} Y &= \frac{1}{m_4} \times \sum (m_n \times Y_n) \\ &= \frac{1}{6.525} (0.88 \times 0 + 4.35 \times 0 + 0.795 \times 111 + 0.5 \times 210) = 29.6 \text{ mm} \end{aligned}$$

$$\begin{aligned} Z &= \frac{1}{m_4} \times \sum (m_n \times Z_n) \\ &= \frac{1}{6.525} (0.88 \times 5 + 4.35 \times 42.5 + 0.795 \times 42.5 + 0.5 \times 42.5) = 37.4 \text{ mm} \end{aligned}$$

4. Calculation of Load Factor for Static Load

m_4 : Mass

m_4 is the mass which can be transferred by the thrust, and as a rule, is actually

about 0.3 to 0.7 of the thrust. (This differs depending on the operating speed.)

M_1 : Moment

$M_1 \text{ max}$ (from ① of graph MY1HT/ M_1) = 60 [N·m]

$$M_1 = m_4 \times g \times Z = 6.525 \times 9.8 \times 37.4 \times 10^{-3} = 2.39 \text{ [N·m]}$$

$$\text{Load factor } \alpha_1 = M_2 / M_1 \text{ max} = 2.39 / 60 = 0.04$$

M₃: Moment**M₃ max** (from ② of graph MY1HT/M₃) = 60 [N·m]

$$M_3 = m_4 \times g \times Y = 6.525 \times 9.8 \times 29.6 \times 10^{-3} = 1.89 \text{ [N·m]}$$

$$\text{Load factor } \alpha_2 = M_3 / M_3 \text{ max} = 1.89 / 60 = 0.03$$

5. Calculation of Load Factor for Dynamic Moment

Equivalent load F_E at impact

$$F_E = 1.4U_a \times \delta \times m \times g = 1.4 \times 700 \times \frac{1}{100} \times 6.525 \times 9.8 = 626.7 \text{ [N]}$$

M_{1E}: Moment**M_{1E} max** (from ③ of graph MY1HT/M₁ where 1.4Ua = 980 mm/s) = 42.9 [N·m]

$$M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 626.7 \times 37.4 \times 10^{-3} = 7.82 \text{ [N·m]}$$

$$\text{Load factor } \alpha_3 = M_{1E} / M_{1E} \text{ max} = 7.82 / 42.9 = 0.18$$

**M_{3E}:** Moment**M_{3E} max** (from ④ of graph MY1HT/M₃ where 1.4Ua = 980 mm/s) = 42.9 [N·m]

$$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 626.7 \times 29.6 \times 10^{-3} = 6.19 \text{ [N·m]}$$

$$\text{Load factor } \alpha_4 = M_{3E} / M_{3E} \text{ max} = 6.19 / 42.9 = 0.14$$

6. Sum and Examination of Guide Load Factors

$$\Sigma\alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 = 0.39 \leq 1$$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors $\Sigma\alpha$ in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "Guide Cylinder Selection Software" on the SMC website.

		0.2	0.3	0.4	0.5	0.6	0.7	0.8
50	1962	392	588	784	981	1177	1373	1569
63	3115	623	934	1246	1557	1869	2180	2492

* Theoretical output [N] = Pressure [MPa] x Piston area [mm²]

Made to Order Made to Order Common Specifications
(For details, refer to page 114.)

Symbol	Specifications
-XC67	NBR rubber lining in dust seal band

Standard Stroke

Bore size [mm]	Standard stroke [mm]	Intermediate stroke	Maximum manufacturable stroke
50, 63	200, 400, 600, 800, 1000, 1500, 2000	Strokes of 201 to 1999 mm (1 mm increments) other than standard strokes	5000

Ordering example

* Intermediate stroke can be ordered the same as the standard stroke. MY1HT50-500L-Y7BW

Weight

Bore size [mm]	Basic weight	Additional weight per each 25 mm of stroke	Weight of moving parts	Side support weight (per set)	Stroke adjustment unit weight			
					Type A and B	L unit weight	LH unit weight	
50	30.62	0.87	5.80	0.17		0.62	0.93	1.24
63	41.69	1.13	8.10	0.17		1.08	1.62	2.16

Calculation: (Example) **MY1HT50-400L**

- Basic weight 30.62 kg
- Additional weight 0.87/25 mm stroke $30.62 + 0.87 \times 400/25 = 45.8$
- L unit weight 0.62 kg

- Cylinder stroke 400 mm stroke $30.62 + 0.87 \times 400/25 + 0.62 \times 2 \approx 45.8$

Refer to pages 109 to 112 for the specifications with auto switch.

MY1HT Series

Cushion Capacity

Cushion Selection

<Stroke adjustment unit with built-in shock absorber>

L unit

Use this unit when cushioning is required outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line and below the L unit limit line.

H unit

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

Stroke Adjustment Unit Absorption Capacity

MY1HT50 Horizontal collision: $P = 0.5 \text{ MPa}$

MY1HT63 Horizontal collision: $P = 0.5 \text{ MPa}$

⚠ Precautions

For details on the MY1HT Series Mechanically Jointed Rodless Cylinder, refer to “Specific Product Precautions” on pages 119 to 125.

Side Supports

Side support A
MY-S63A

Side support B
MY-S63B

Dimensions

Model	Applicable cylinder	A	B
MY-S63^A_B	MY1HT50	284	314
	MY1HT63	304	334

* Side supports consist of a set of right and left brackets.

Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

⚠ Caution

- If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting it. Also, for long stroke operation involving vibration and impact, the use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
- Support brackets are not for mounting; use them solely for providing support.

Cylinder series	Applicable bore size [mm]	
	50	63
MY1HT	BMP1-032	

When attaching an auto switch, first take a switch spacer between your fingers and press it into a switch mounting groove. When doing this, confirm that it is set in the correct mounting orientation, or reattach if necessary.

Next, insert an auto switch into the groove and slide it until it is positioned under the switch spacer.

After establishing the mounting position, use a watchmaker's flat head screwdriver to tighten the auto switch mounting screw which is included.

* When tightening an auto switch mounting screw, use a watchmaker's screwdriver with a handle diameter of about 5 to 6 mm. Also, tighten with a torque of about 0.05 to 0.1 N·m. As a guide, it should be turned about 90° past the point at which tightening can be felt.

Other than the applicable auto switches listed in "How to Order," the following auto switches are mountable.
For detailed specifications, refer to the **Web Catalog**.

Type	Model	Electrical entry	Features	Applicable bore size
Solid state auto switch	D-Y69A, Y69B, Y7PV	Grommet (Perpendicular)	—	MY1B ø50 to ø100 MY1M ø25 to ø63 MY1C ø25 to ø63
	D-Y7NWV, Y7PWV, Y7BWV		Diagnostic indication (2-color indicator)	
	D-Y59A, Y59B, Y7P	Grommet (In-line)	—	
	D-Y7NW, Y7PW, Y7BW		Diagnostic indication (2-color indicator)	

* With pre-wired connector is also available for solid state auto switches. For details, refer to the **Web Catalog**.

* Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)/Y7G/Y7H) are also available. For details, refer to the **Web Catalog**.

Auto Switch Mounting

Made to Order Common Specifications

Specific Product Precautions

Prior to Use

Auto Switch Connections and Examples

Sink Input Specifications

3-wire, NPN

2-wire

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

Source Input Specifications

3-wire, PNP

2-wire

Examples of AND (Series) and OR (Parallel) Connections

* When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid.
Depending on the operating environment, the product may not operate properly.

3-wire AND connection for NPN output

(Using relays)

(Performed with auto switches only)

3-wire AND connection for PNP output

(Using relays)

(Performed with auto switches only)

2-wire AND connection

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with a load voltage less than 20 V cannot be used.

$$\begin{aligned} \text{Load voltage at ON} &= \text{Power supply voltage} - \\ &\quad \text{Residual voltage} \times 2 \text{ pcs.} \\ &= 24 \text{ V} - 4 \text{ V} \times 2 \text{ pcs.} \\ &= 16 \text{ V} \end{aligned}$$

Example: Power supply is 24 VDC
Internal voltage drop in auto switch is 4 V.

2-wire OR connection

(Solid state)
When two auto switches are connected in parallel, malfunction may occur because the load voltage will increase when in the OFF state.

(Reed)
Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

$$\begin{aligned} \text{Load voltage at OFF} &= \text{Leakage current} \times 2 \text{ pcs.} \times \\ &\quad \text{Load impedance} \\ &= 1 \text{ mA} \times 2 \text{ pcs.} \times 3 \text{ k}\Omega \\ &= 6 \text{ V} \end{aligned}$$

Example: Load impedance is 3 kΩ.
Leakage current from auto switch is 1 mA.

1 Shock Absorber Soft Type RJ Series Mounted

Symbol
-XB22

The standard cylinder has been equipped with shock absorber soft type RJ series type to enable soft stopping at the stroke end.
Two different shock absorbers are available in accordance with the operating conditions.

Applicable Series

Description	Model	Bearing type	Applicable bore size
Mechanically jointed rodless cylinder	MY1B	Basic	ø10 to ø40
	MY1M	Slide bearing guide	ø16 to ø40
	MY1C	Cam follower guide	ø16 to ø40
	MY1H	Single-axis linear guide	ø10 to ø40

How to Order

How to Order a Stroke Adjustment Unit for MY Itself

Specifications

Absorbed energy	For the impact mass graph, refer to page 116.
Specifications other than the above and dimensions	Same as the standard type

Specific Product Precautions 1

Be sure to read this before handling the products.

Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

Selection

⚠ Caution

1. When using a cylinder with long strokes, implement intermediate supports.

When using a cylinder with long strokes, implement intermediate supports to prevent the tube from sagging and being deflected by vibration or an external load.

Refer to the Guide for Side Support Application on pages 34, 55, 71, 97, and 108.

2. For intermediate stops, use a dual-side pressure control circuit.

Since the mechanically jointed rodless cylinders have a unique seal structure, slight external leakage may occur. Controlling intermediate stops with a 3-position valve cannot hold the stopping position of the slide table (slider). The speed at the restarting state also may not be controllable. Use the dual-side pressure control circuit with a PAB-connected 3-position valve for intermediate stops.

3. Constant speed

Since the mechanically jointed rodless cylinders have a unique seal structure, a slight speed change may occur. For applications that require constant speed, select applicable equipment for the level of demand.

4. Load factor of 0.5 or less

When the load factor is high against the cylinder output, it may adversely affect the cylinder (condensation, etc.) and cause malfunctions. Select a cylinder to make the load factor 0.5 or less. (Mainly when using an external guide)

5. Cautions on less frequent operation

When the cylinder is used extremely infrequently, operation may be interrupted in order for anchoring and a change lubrication to be performed or service life may be reduced.

6. Consider uncalculated loads such as piping, cableveyor, etc., when selecting a load moment

Calculation does not include the external acting force of piping, cableveyor, etc. Select load factors taking into account the external acting force of piping, cableveyor, etc.

7. Accuracy

Mechanically jointed rodless cylinders do not guarantee traveling parallelism. When accuracy in traveling parallelism and intermediate stroke position is required, please consult SMC.

8. Air leakage

Due to the mechanically jointed rodless cylinder's special seal construction, a small amount of air leakage that does not affect the thrust will occur. A subtle "hissing" sound may be heard as a result.

Mounting

⚠ Caution

2. When connecting to a load which has an external guide mechanism, use a discrepancy absorption mechanism.

Mechanically jointed rodless cylinders can be used with a direct load within the allowable range for each type of guide. Please note that careful alignment is necessary when connecting to a load having an external guide mechanism. Mount the external guide mounting brackets and floating brackets in a place where the required degree of freedom for the floating Y and Z axes can be secured.

The thrust transmission area of the floating bracket must be fixed so that it does not partially contact the body.

* Refer to the Coordinates and Moments in Model Selection on page 8 for the details of floating Y and Z axes.

3. Do not mount cylinders as they are twisted.

When mounting, be sure for a cylinder tube not to be twisted. The flatness of the mounting surface is not appropriate, the cylinder tube is twisted, which may cause air leakage due to the detachment of a seal belt, damage a dust seal band, and cause malfunctions.

4. Do not mount a slide table on the fixed equipment surface.

It may cause damage or malfunctions since an excessive load is applied to the bearing.

Mounting with a slide table (slider)

5. Do not mount in a cantilevered way.

Mounting in a cantilevered way

6. Fixed parts of the cylinder on both ends must have at least 5 mm of contact between where the bottom of the cylinder tube and the equipment surface.

Mounting

⚠ Caution

1. Do not apply strong impacts or excessive moment to the slide table (slider).

The slide table (slider) is supported by precision bearings (MY1C, MY1H) or resin bearings. Therefore, do not apply strong impacts or excessive moment, etc., when mounting workpieces.

MY1 Series

Specific Product Precautions 2

Be sure to read this before handling the products.

Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

Mounting

⚠ Caution

7. Do not generate negative pressure in the cylinder tube.

When the cylinder is in a non-pressurized state, such as during a test run, maintenance, etc., external or inertial force may cause negative pressure to be generated inside the cylinder. In such cases, the seal belt may come off, resulting in a temporary air leak.

- Examples:

- 1) When external force is used to move a slide table all at once during installation, a test run, etc.
- 2) When a vertically-mounted slide table carrying a load drops due to its weight

(In either case, the smaller the speed controller's opening is set, the more likely negative pressure is to be generated.)

- For negative pressure prevention

When using external force to move a slide table, move it slowly and steadily at about 20 mm/s. (If the speed controller's opening is set extremely small, increase the opening only during manual operation.)

- If the seal belt comes off

If the seal belt comes off due to negative pressure and the air is leaking, manually move the slide table from the beginning to the end of the cylinder's full stroke slowly and steadily at about 20 mm/s.

(If the speed controller's opening is set extremely small, increase the opening only during manual operation.)

If air continues to leak even after the above-mentioned restoration methods have been tried, please contact your nearest sales office.

8. Do not unnecessarily alter the guide adjustment setting.

• The adjustment of the guide is preset and does not require readjustment under normal operating conditions. Therefore, do not unnecessarily alter the guide adjustment setting. However, series other than the MY1H series can be readjusted and their bearings can be replaced.

To perform these operations, refer to the bearing replacement procedure in the operation manual.

9. Do not get your hands caught during cylinder operation.

For the cylinder with a stroke adjustment unit, the space between the slide table and stroke adjustment unit is very small, and your hands may get caught. When operating without a protective cover, be careful not to get your hands caught.

10. Do not use a shock absorber together with air cushion.

11. Air cushion adjustment

To adjust the air cushion, gradually release the cushion needle from the fully closed state until the required deceleration speed is reached. Keep in mind that the full stroke cannot be operated when in the fully closed state and that deceleration cannot be achieved when in the fully open state.

12. Refer to the figures below for how to install the holding bolt for the floating bracket.

<Ø10 to Ø63>

Installation of Holding Bolts

Tightening Torque for Holding Bolts

[N·m]

Auto Switch Mounting

Made to Order Common Specifications

Specific Product Precautions

MY1 Series

Specific Product Precautions 3

Be sure to read this before handling the products.

Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

Mounting

⚠ Caution

12. Refer to the figure below when using the adjustment bolt to perform stroke adjustment.

When the effective stroke of the shock absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Secure the adjustment bolt at the position where it protrudes approximately 0.5 mm from the shock absorber.

13. Tightening Torque for Stroke Adjustment Unit (Lock Plate) Holding Bolts

Use caution not to get your hands caught in the unit.

When using a product with stroke adjustment unit, the space between the slide table (slider) and the stroke adjustment unit becomes narrow at the stroke end, causing a danger of hands getting caught. Install a protective cover to prevent direct contact with the human body.

<Fastening of unit>

The unit can be secured by evenly tightening the four unit holding bolts.

Caution

Do not operate with the stroke adjustment unit fixed at an intermediate position. (MY1H: Excludes ø10)

When the stroke adjustment unit is fixed at an intermediate position, slippage can occur depending on the amount of energy released at the time of an impact. In such cases, as a stroke adjustment unit with the spacer for intermediate securing is available, it is recommended to use it. (MY1B: Excludes ø10)

For other lengths, please consult with SMC (Refer to "Tightening Torque for Stroke Adjustment Unit Holding Bolts".)

<Stroke adjustment with adjustment bolt>

Loosen the adjustment bolt lock nut, and adjust the stroke from the lock plate side using a hexagon wrench. Retighten the lock nut.

<Stroke adjustment with shock absorber>

Loosen the two lock plate holding bolts, turn the shock absorber and adjust the stroke. Then, uniformly tighten the lock plate holding bolts to secure the shock absorber.

Take care not to over-tighten the holding bolts. (MY1B: Excludes ø10, ø16, ø20 L unit, MY1M/C: Excludes ø16, ø20, ø50, and ø63)

(Refer to "Tightening Torque for Stroke Adjustment Unit Lock Plate Holding Bolts".)

* Although the lock plate may slightly bend due to tightening of the lock plate holding bolt, this does not affect the shock absorber and locking function.

MY1 Series

Specific Product Precautions 4

Be sure to read this before handling the products.

Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

Mounting

⚠ Caution

<MY1H>

To adjust the stroke adjustment unit of the MY1H10, follow the step shown below.

Section A-A

Adjusting Procedure

- Loosen the two lock nuts, and then loosen the holding screws by turning them approximately two turns.
- Move the body to the notch just before the desired stroke. (The notches are found in alternating increments of 5 mm and 10 mm.)
- Tighten the holding screw to 0.3 N·m. Make sure that the tightening does not cause excessive torque.

The fixture fits into the fastening hole in the guide rail to prevent slippage, which enables fastening with low torque.

- Tighten the lock nut to 0.6 N·m.
- Make fine adjustments with the adjustment bolt and shock absorber.

- Use the formula below to calculate the absorbed energy of the stroke adjustment unit with shock absorber.

Tightening Torque for Stroke Adjustment Unit Holding Bolts [N·m]

Bore size [mm]	Tightening torque
10	Refer to "Adjusting Procedure" above.
16	0.7
20	1.8
25	1.8
32	3.5
40	5.8

Operating Environment

⚠ Warning

- Do not use in an environment where the cylinder is exposed to coolant, cutting oil, water drops, adhesive foreign matter, dust, etc. and avoid use with compressed air containing drainage and foreign matter.

Foreign matter or liquids on the cylinder's interior or exterior can wash out the lubricating grease, which can lead to deterioration and damage of dust seal band and seal materials, causing a danger of malfunction.

When operating in locations with exposure to water and oil, or in dusty locations, provide protection such as a cover to prevent direct contact with the cylinder, or mount so that the dust seal band surface faces downward, and operate with clean compressed air.

- Carry out cleaning and grease application suitable for the operating environment.

Carry out cleaning regularly when using in an operating environment in which the product is likely to get dirty.

After cleaning, be sure to apply grease to the top side of the cylinder tube and the rotating parts of the dust seal band and bearing (guide). Also, apply grease to the top side of the cylinder tube and the rotating parts of the dust seal band and bearing (guide) when used in an environment prone to dryness, etc. We recommend the above cleaning and grease application be carried out once a month as a guide as this will improve the service life of the product. For cleaning of the slide table (slider) interior and grease application, please consult SMC.

- The product is not designed to be used in a clean room.

If you are considering using it in a clean room, please consult with SMC.

Service Life and Replacement Period of Shock Absorber

⚠ Caution

- The cylinder, equipment and/or workpieces might be destroyed if the table collides the end of the stroke without being buffered properly by the shock absorber. See below for the number of cycles that are possible within the catalog usage range (model selection graph range), and check the operating conditions periodically, adjusting or replacing the shock absorber when necessary.

RJ0604 : 1.5 million times

RB08□□ : 1.2 million times

RB10□□ to RB2725: 2 million times

* Specified service life (suitable replacement period) is the value at room temperature (20 to 25°C). The period may vary depending on the temperature and other conditions. In some cases, the shock absorber may need to be replaced before the allowable operating cycle above.

Type of impact	Horizontal collision	Vertical collision (Downward)	Vertical collision (Upward)
Kinetic energy E ₁	$\frac{1}{2} m \cdot v^2$		
Thrust energy E ₂	F·s	F·s + m·g·s	F·s - m·g·s
Absorbed energy E	$E_1 + E_2$		

Symbol

v: Collision speed (m/s)

F: Cylinder thrust (N)

s: Shock absorber stroke (m)

m: Mass of impact object (kg)

g: Gravitational acceleration (9.8 m/s²)

* The speed of the impact object is measured at the time of impact with the shock absorber.

MY1H Series

Specific Product Precautions 5

Be sure to read this before handling the products.

Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

MY1H: With End Lock

Recommended Pneumatic Circuit

⚠ Caution

This is necessary for the correct locking and unlocking actions.

Operating Precautions

⚠ Caution

1. Do not use 3-position solenoid valves.

Avoid use in combination with 3-position solenoid valves (especially closed center metal seal types). If pressure is trapped in the port on the lock mechanism side, the cylinder cannot be locked.

Furthermore, even after being locked, the lock may be released after some time due to air leaking from the solenoid valve and entering the cylinder.

2. Back pressure is required to release the lock.

Before starting operation, be sure to control the system so that air is supplied to the side without a lock mechanism (in case of locks on both ends, the side where the slide table is not locked) as shown in the figure above. There is a possibility that the lock may not be released. (Refer to "Lock Release".)

3. Release the lock when mounting or adjusting the cylinder.

If mounting or other work is performed when the cylinder is locked, the lock unit may be damaged.

4. Set the load to be at 50% or less of the theoretical output.

If the load exceeds 50% of the theoretical output, this may cause problems such as failure of the lock to release, or damage to the lock unit.

5. Do not operate multiple cylinders in synchronization.

Avoid applications in which two or more end lock cylinders are synchronized to move one workpiece, as one of the cylinder locks may not be able to release when required.

6. Use a speed controller with meter-out control.

Lock cannot be released occasionally by meter-in control.

7. Be sure to operate completely to the cylinder stroke end on the side with the lock.

If the cylinder piston does not reach the end of the stroke, locking and unlocking may not be possible. (Refer to "End Lock Mechanism Adjustment".)

Operating Pressure

⚠ Caution

1. Supply air pressure of 0.15 MPa or higher to the port on the lock mechanism side, as it is necessary for releasing the lock.

Exhaust Speed

⚠ Caution

1. Locking will occur automatically if the pressure applied to the port on the lock mechanism side falls to 0.05 MPa or less. In the cases where the piping on the lock mechanism side is long and thin, or the speed controller is separated at some distance from the cylinder port, the exhaust speed will be reduced. Take note that some time may be required for the lock to engage. In addition, clogging of a silencer mounted on the solenoid valve exhaust port can produce the same effect.

Relation to Cushion

⚠ Caution

- When the air cushion on the lock mechanism side is in a fully closed or nearly closed state, there is a possibility that the slide table will not reach the stroke end, in which case locking will not occur.

End Lock Mechanism Adjustment

⚠ Caution

- The end lock mechanism is adjusted at the time of shipping. Therefore, adjustment for operation at the stroke end is unnecessary.
- Adjust the end lock mechanism after the stroke adjustment unit has been adjusted. The adjustment bolt and shock absorber of the stroke adjustment unit must be adjusted and secured first. Locking and unlocking may not occur otherwise.
- Perform fine adjustment of the end lock mechanism as follows. Loosen the lock finger holding bolts, and then adjust by aligning the center of the lock piston with the center of the lock finger hole. Secure the lock finger.

Lock Release

⚠ Warning

- Before releasing the lock, be sure to supply air to the side without a lock mechanism, so that there is no load applied to the lock mechanism when it is released. (Refer to "Recommended Pneumatic Circuit.") If the lock is released when the port on the side without the lock is in an exhaust state, and with a load applied to the lock unit, the lock unit may be subjected to an excessive force and be damaged.

Furthermore, sudden movement of the slide table is very dangerous.

Manual Release

⚠ Caution

1. When manually releasing the end lock, be sure to release the pressure.

If it is unlocked while the air pressure still remains, it will lead to damage a workpiece, etc. due to unexpected lurching.

2. Perform manual release of the end lock mechanism as follows.

Push the lock piston down with a screwdriver, etc., and move the slide table.

Other handling precautions regarding mounting, piping and environment are the same as the standard series.

MY1HT Series

Specific Product Precautions 6

Be sure to read this before handling the products.

Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

MY1HT

Mounting

⚠ Caution

1. Do not put hands or fingers inside when the body is suspended.

Since the body is heavy, use eyebolts when suspending it. (The eyebolts are not included with the body.)

Stroke Adjustment Method

⚠ Caution

1. As shown in Fig. 1, to adjust the stopper bolt within the adjustment range A, insert a hexagon wrench from the top to loosen the hexagon socket head set screw by approximately one turn, and then adjust the stopper bolt with a flat head screwdriver.

Fig. 1 Stroke adjusting section detail

* The shock absorber is included in the unit part no.

Stopper Bolt Holding Screw Tightening Torque

Stopper Bolt

Tightening Torque for Stroke Adjustment Unit Lock Plate Holding Bolts

[N·m]

Bore size [mm]	Tightening torque
50	0.6
63	1.5

2. When the adjustment described in 1 above is insufficient, the shock absorber can be adjusted. Remove the covers as shown in Fig. 2 and make further adjustment by loosening the hexagon nut.

Fig. 2 Cover installation and removal

3. Various dimensions are indicated in Table 1. Never make an adjustment that exceeds the dimensions in the table, as it may cause an accident and/or damage.

Table 1

[mm]

Bore size [mm]	50	63
A to A _{MAX}	6 to 26	6 to 31
B to B _{MAX}	14 to 54	14 to 74
C	87	102
Max. adjustment range	60	85

Specific Product Precautions

MY1HT Series Specific Product Precautions 7

Be sure to read this before handling the products.

Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

Disassembly and Assembly Procedure

⚠ Caution

Disassembly step

1. Remove the hexagon socket head cap screws 1, and remove the upper plates.
2. Remove the top cover.
3. Remove the hexagon socket head cap screws 2, and remove the end covers and couplers.
4. Remove the hexagon socket head cap screws 3.
5. Remove the hexagon socket head cap screws 4, and remove the end supports.
6. Remove the cylinder.

Assembly step

1. Insert the MY1BH cylinder.
2. Temporarily fasten the end supports with the hexagon socket head cap screws 4.
3. With two hexagon socket head cap screws 3 on the L or R side, pull the end support and the cylinder.
4. Tighten the hexagon socket head cap screws 3 on the other side to eliminate the looseness in the axial direction. (At this point, a space is created between the end support and the end plate on one side, but this is not a problem.)
5. Retighten the hexagon socket head cap screws 4.
6. Fasten the end cover with the hexagon head cap screws 2, while making sure that the coupler is in the right direction.
7. Place the top cover on the body.
8. Insert the holding blocks into the top cover and fasten the upper plates with the hexagon socket head cap screws 1.

*1 Cylinder For Driving (MY1BH Series)

Since the MY1BH series is a cylinder for driving for the MY1HT series, its construction is different from the MY1B series. Do not use the MY1B series as a cylinder for driving, since it will lead to damage.

How to Order

High rigidity/Linear guide type	MY1HT	50			-	300	L	-	Z73													
Cylinder for driving	MY1BH	50			-	300

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1, and other safety regulations.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

- *1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
- ISO 4413: Hydraulic fluid power – General rules relating to systems.
- IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Part 1: General requirements)
- ISO 10218-1: Manipulating industrial robots – Safety.
etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Safety Instructions

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
